# WHAT IS PRO-CONTROL.ONLINE

**Pro-Control.online is a web service that makes it possible to easily organize and control the quality of any number of diagnostic devices. It offers flexibility and scalability of a cloud service and great potential and complex functionality of the desktop application based on a universal medical images browser. The entire platform supports DICOM protocol that allows seamless integration with the hospital IT system making the data transfer safe and easy.**

**It can be used by both small dental practices and a chain of hospitals across the country and beyond. If many people are responsible for running tests in an organization, their separate accounts can be combined making it possible to get an insight into how the organization is running from one place.**

# FEATURES

## Fully automatic as well as manual analysis of test images

The application has a fully functional DICOM viewer, like the one in a diagnostic workstation, thus test images may be viewed in the most effective way. What is more, it may be used on every computer, even on a simple laptop.

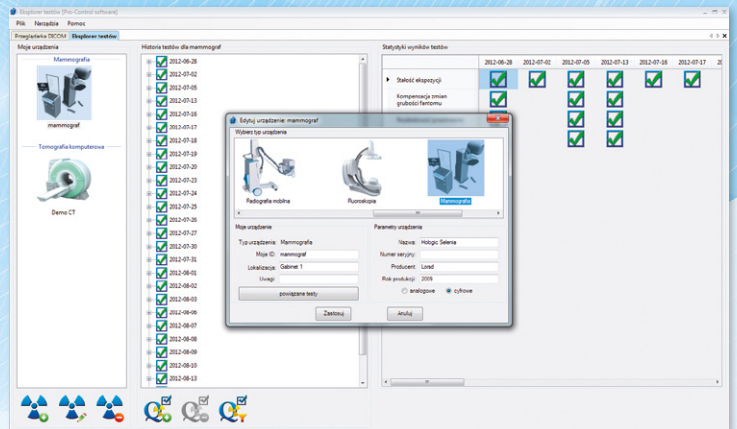

## Multiple modalities

Any number of devices from all modalities covered by quality control can be entered in the program. Every device is assigned tests which can be carried out on it with our phantoms.

## User defined fail / pass criteria

For every test it is possible to define conditions specifying whether it is a pass or a fail (default values are in accordance with the current legal regulations).

### At a single glance you will see which test has not been passed and why

Results of tests carried out for a device are grouped according to dates, providing instant data about the general result of quality tests on a given day. A graphic symbol next to a test name informs about the result, and the information on the side panel gives the cause of a possible error in the test.

### Safe and sound

Your configuration, reports and other data are always safe and accessible worldwide in our cloud - there is no danger of losing them because of computer failure. Data in the cloud is secured and backed up regularly. The highest level of security is guaranteed by our certified ISO 27001 system.

### Constant synchronization and easy sharing

Your configuration, reports and other data can be synched and shared across all your installations - thanks to this you can check the status of diagnostic devices in all your remote locations from your local computer.

1. all subscriptions come with constant support and warranty. We provide your software with up-to-date new versions, new features, entitled updates, and support, without extra charges except the subscription purchase. This not only guarantees constant trouble free usage thanks to the fixes and security patches, but the most important incremental enhancements to the total user experience
2. maximum amount of different QA equipment supported (phantoms, meters, etc.)
3. maximum number of diagnostic devices supported
4. number of tests that can be analyzed per month
5. full transfer and analysis automatization with the cloud
6. offline licensing and updates - special proxy service is used to provide updates and licensing to offline computers running the Pro-Control.online desktop app (requires presence of the internet connected computer in the intranet)
7. discount for purchasing annual subscriptions instead of the monthly billing
8. up to 3 users included in the subscription price
